

⇒ composite function or function of the functions

ex- $f(n) = 2n-1$, $g(n) = 3n-2$.

find $f \circ g(n)$ or $f[g(n)]$

Sol

$$f(n) = 2n-1$$

$$\text{let } g(n) = n.$$

$$f \circ g \quad f(n) = 2(3n-2)-1$$

$$f \circ g \quad f(n) = 6n-4-1$$

$$f \circ g \quad f(n) = 6n-5$$

$$f \circ g = 6n-5$$

so This will be a composite function
